

TELUS Desktop Backup.

Protect your PCs against data loss.

More than 80% of business data is saved on PC hard drives.

So what happens if the PC is comprised by viruses, hackers, crashes, power failure, theft or user error? Your personal data and your proprietary business data are lost, and productivity will be affected. Your confidentiality can also be compromised. It's just a matter of time that one small incident on your desktop or laptop can turn into a company-wide or enterprise-wide brand, reputation or legal issue.

Many companies and enterprises have not defined a backup policy and with the responsibility falling on the individual user it often never gets done or they rely on hardware that can fail or be compromised. And if there is a policy in place, only 10% of employees comply. So how do you safeguard the 60% of business data that exists on unprotected hard drives?

TELUS Desktop Backup enables regular, automatic backups for corporate data residing on employee desktops and laptops. Eliminating the inherent risk and inconsistency associated with manual external USB drive or CD back-ups, and TELUS Desktop Backup is simple to install and use, speedy and a highly secure solution for preventing data loss.

How it works:

Employees download the client software onto their desktops or laptops. Using the AutoScheduler, employees select files for backup and backup frequency. The software compresses and encrypts the data being sent to the data centre, where it is stored securely and mirrored. Even many versions of files can be stored. Simply using an account number and password, an employee can access files from any computer with an Internet connection to recover their data.

Capture, store and recover critical corporate data.

For consultants and small businesses, back up is critical but because it's not revenue generating, it often gets overlooked. For large companies and enterprises, employee compliance rates to backup policies are low, and required IT intervention drains resources and network/storage can get overloaded. With TELUS Desktop Backup, you protect data and automate the frequency of the backup without IT investments in technology, people or time.

- **Simple set up.** Download software, schedule, save and it's automated within a few clicks.
- **Secure data transfer.** 128-bit AES encryption helps to ensure safe transmission of data to and from the data centre.
- **Convenient access.** Data is accessible from anywhere, at any time using account and password login from any computer with an Internet connection.
- **Redundancy built in.** The system saves the last seven copies of any file so you can recover previous versions if required.
- **Supporting services.** Enhance the benefits of your backup solution with HEAL, which restores the desktop/laptop in its exact state including data and applications and iRoam, which enables remote access to any version of backed up files from any computer with Internet access.

TELUS Desktop Backup.

- **Load management.** Delta Block compares files and only updates previously backed up files that have changed to minimize network traffic and backup duration.
- **Support.** Access free voice and email support to limit IT intervention if issues do arise.

Solutions for businesses of any size.

TELUS Desktop Backup offers five different solution options, depending on the space that you need for back up, your flexibility requirements and the supporting services you may want to add.
